Copper-nickel at BWEA29

CuNi Task Force Marches on Forthcoming Exhibition

The Copper-nickel Task Force is set to appear at this year's BWEA exhibition and will be bringing an exciting wealth of expertise and experience from Offshore Oil and Gas applications that visitors won't want to miss.

At Stand 85, this global group of specialists in copper and nickel alloys will be represented by Copper Development Association and Nickel Institute, ready to explain how these alloys can solve problems such as corrosion and biofouling in seawater environments, and to provide the latest technology transfer news.

For in-depth information on all these topics, visit the Task Force's website at www.coppernickel.org. It features, amongst other attractions, an interactive presentation containing the most crucial and up-to-date information on these workhorse alloys, and also addresses many questions on application of and best-practise for copper-nickel alloys.

An electronic library, including the interactive presentation, will be available on CDs that can be collected from Stand 85.
