## Copper Information Online

### Copper Development Association launches updated website

In response to high demand and an evolving approach to delivering more immediate and up-to-date information to its many and varied users, Copper Development Association has launched an updated, new-look website at [www.copperinfo.co.uk](http://www.copperinfo.co.uk).

Offering resources on copper applications ranging from electrical, architectural and plumbing to the brasses, health and most recently antimicrobial, the site has a comprehensive search function. This allows users to find items both in subsections of copperinfo, such as the Power Quality microsite, and also on other useful, related websites that may offer further in-depth information.

An online enquiry form enables users to quickly and easily put questions to the experts, putting them in touch with the vast network and placing its information repositories and expertise at their disposal.

Copperinfo is also a portal for UK designers and specifiers to information and resources from around the global copper network, providing access to worldwide knowledge and contacts.

For professionals and individuals with an interest in copper's assorted benefits, [www.copperinfo.co.uk](http://www.copperinfo.co.uk) is an indispensable resource, now easier to use than ever.

For further information, contact:
